

VISUAL IDENTITY GUIDE

Daily Customer Churn Predictor · VivaMarket Brasil

Version 1.0 · Project-facing deliverable PDF

PURPOSE

This guide defines the practical brand baseline for notebooks, HTML reports, and future interfaces in the churn project. It is derived from the available brand assets and should be used consistently across business-facing deliverables.

BRAND PERSONALITY

- Trust and analytical rigor
- Operational clarity
- Commercial energy
- Friendly automation

PRIMARY LOGO USAGE

Use logo.png on white or very light neutral backgrounds. Do not stretch, rotate, or place it on saturated backgrounds with poor contrast.

Only logo.png remains as the canonical logo asset. Legacy square logo derivatives were removed from the deliverable set.

COLOR SYSTEM

Primary palette and semantic usage

#005090

VivaMarket Blue
Titles, controls, trusted analytical content

#208040

VivaMarket Green
Positive outcomes, stable performance, retained customers

#E0B000

VivaMarket Gold
Warnings, medium-priority items, opportunities

#C01010

VivaMarket Red
High-risk churn alerts, critical issues

#104070

Deep Blue
Structural accents, advanced analytical sections

#60A060

Soft Green
Secondary positive support

#F0F0F0

Light Neutral
Backgrounds, table fills, card surfaces

APPLICATION RULES

HTML REPORTS

Embed the logo in the header, use blue as structural color, keep white backgrounds, and map HIGH/MEDIUM/LOW risk to red/gold/green consistently.

NOTEBOOKS

Keep chapter storytelling clean, use branded callout boxes for business insights, and reserve red only for true high-risk signals.

DASHBOARDS

Prefer rounded cards, light borders, clear KPI sections, and subtle grid lines. Avoid dark themes and neon palettes.

AUTOMATION / N8N DOCUMENTATION

Treat orchestration artifacts as business deliverables: branded cover/header, readable sections, and clear semantic color use.

TYPOGRAPHY

Use a clean sans-serif stack such as Inter, Arial, or Helvetica. Titles in dark blue, body text in dark gray, KPI values color-coded semantically.

DO / DO NOT

DO

- Keep semantic colors stable
- Favor legibility over decoration
- Use the logo on light backgrounds

DO NOT

- Reassign risk colors arbitrarily
- Mix unrelated palettes
- Use heavy gradients or dark business dashboards by default
